-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hess (US4572605) in view of Doan et al (US4922607).

Hess discloses a connector assembly/method comprising a pin (10), at least one ring (14), a molded insulative polymer sleeve (16) between the pin and the ring mechanically coupling the pin and the ring and insulating the pin from the ring (Figure 1; column 2, lines 7-15), the ring (14) includes a chamfer (Figure 3), an interior surface of the ring includes grooves which are oblique to a longitudinal axis of the ring, a lead having a lead body wherein the lead coupled with the connector assembly (column 2, line 7-16, 33-35), backfilling material (column 2, lines 59-61), and coupling a conductor with the ring/pin (Figure 3). Hess does not disclose a second and third rings, and a channel within the sleeve which houses a spiral conductor. Doan et al discloses a second and third rings (30, 32), and a channel within the sleeve (Figure 2) which houses a spiral conductor (40). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the second and third rings and spiral conductor of Doan et al in the connector assembly/method of Hess because, second and third rings seal the

connector assembly more efficiently and a spiral conductor allows for a more permanent electrical connection.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawntina T. Fuqua whose telephone number is (703) 305-2581.
